iCombi Pro / iCombi Classic

MarineLine.
Safely cook at sea.

MarineLine.

Designed with rough seas in mind.

Whether on a ship, a yacht, or a drilling rig, every galley needs a reliable, efficient, and flexible cooking system that delivers superior-quality results every single time.

MarineLine cooking systems are designed with the challenges of working at sea in mind. Our developers prioritized safety in the galley and uninterrupted production even on rough seas. The RATIONAL MarineLine is certified by Germanische Lloyd, a globally recognized organization, and fulfills the most stringent USPHS hygiene requirements. MarineLine versions are available for all iCombi Pro, iCombi Classic, and Combi-Duo electric models.

The iCombi Pro and iCombi Classic can be installed flush with the back wall, making the most of tight spaces; the installation kit also meets stringent hygiene standards.

MarineLine features can also be combined with HeavyDutyLine features for additional damage protection.

❶ Marine stands Size XS – 10-full size

The cooking system is bolted onto the stand, which has stainless-steel feet that can be welded or bolted to the floor or the table, ensuring that the cooking system cannot slip or tip.

Available unit stands with anchoring feet:

- › Combi-Duo Stand I
- › Stand II
- › Stand III
- › Stand IV
- › Unit height extension for tabletop setup for half size

❷ Anti-tilting mechanism Size 20-half size, 20-full size and Combi-Duo

The stainless steel feet on floor models can be welded directly to the floor of the ship, or secured against slipping and tipping with the help of the anchoring kit.

On the Combi-Duo, the lower cooking system is bolted to the stand, which can then be bolted or welded to the floor.

The Combi-Duo kit has anchoring points that can be used to secure the cooking systems to the ship's wall, ensuring that neither cooking system can slip or tip.

The option includes:

- › Floor models with stainless steel feet
- › Anchoring kit
- › Combi-Duo stand with anchoring

❸ Door stop

The freely adjustable door stop dampens the opening and shutting motion of the cooking cabinet door, and secures it in the open position. Even on rough seas. The door stop is flat enough that it does not stick out past the edge of the unit, so it can also be used on Combi-Duo cooking systems and with UltraVents.

The option includes:

- › Door stop

❹ Hinging racks and mobile oven rack with latches for Gastronorm accessories

The specially upturned run-in rails on the hinging racks and a latching bracket on the mobile oven rack help keep accessories from slipping out. In addition, all joints on the mobile oven rack and the hinging racks are welded peripherally and meet stringent USHPS requirements – guaranteeing that the unit can be used safely and hygienically at sea.

The option includes:

- › Mobile oven rack or hinging rack for MarineLine

❺ Door impact protection (optional)

An optional impact-protection grid is available to prevent damage to the outer glass on the cooking cabinet door. The grid does not block users' view into the cooking cabinet.

The option includes:

- › Door impact protection grid
